SWE 363: Web Engineering and Development (Term 221)

Homework Assignment #1

Submission Guidelines

- It is an individual assignment.
 - Use HTML5 only (no CSS)
 - Attach your HTML file as part of the submission and upload it to a free web server and provide the URL.
 - Validate your HTML5 file using <https://html5.validator.nu/> and provide a screenshot of the result.
-

You will create an HTML page for a recipe of “Jumbo Fish Fingers” and store in in a file named “**FishFinger.html**” that matches exactly the appearance specified in the document “**Jumbo Fish Fingers.pdf**”.

When the user clicks on “submit”, the default email application opens with the “to” field being filled out.

The following files are attached:

1. **Jumbo Fish Fingers.pdf**: the output should look the same as this picture.
2. **FishFingerReceipe.txt**: a text file that you can copy and paste from into your text editor to get started. So you don't need to type in all of the text.
3. **JumboFishFingers.jpg**: the picture of the fish fingers.
4. **PlusSign.jpg**: Picture of the plus sign.
5. **SnapshotTopPage.png** showing how the top of the page should look like.
6. **TablespoonAbbreviation.png** and **TeaspoonAbbreviation.png**: When you hover on the abbreviations “tsp” and “tbsp”, the full names should appear as in the pictures.
7. **SearchGoogle.png**: When you click on the link at the bottom of the page, you should open the google search with the keywords fish, fingers, and recipe.

Deliverables:

- **FishFinger.html**
- **HW1.pdf** that contains: (1) the URL of FishFinger.html and (2) a Screenshot of the result of the validation.
